

AVERCAB[®]

CABLE

PRODUCT CATALOGUE

IS:694/2010

IS:1554(P-1)1988

IS:7098(P-1)1988

IS:14255/1995

PRODUCT RANGE

Avercab provides a very wide range of products to its customers. The company is perhaps one of the few to offer customers specialty cables such as fire survival cables, zero halogen cables and braided cables. All wires are manufactured as per global quality and customer specifications.

- **LT Copper/Aluminum Armoured/Unarmoured Cables**
- **LT PVC and XLPE Power/Control Cables**
- **Thermocouple Compensating & Extension Cables**
- **FRLS/FR/HR/HFFR/HOFR/ Rubber/LDPE/LSOH Power Control & Instrumentation Cables**
- **Flexible (Single & Multicore) and Cords**
- **House Wires (FR/FRLS/HRPVC/LSOH)**
- **Fire Survival**
- **Welding Cables/Rubber Cables**
- **Flat Cable**
- **Ship Wiring Cables**
- **Aerial Bunched Cables (AB Cables)**
- **Bare Insulated Conductor**

& MOREAS PER CUSTOMER SATISFACTION
IN BS, VDE, IEC, IS AND SABS STANDARDS
(UPTO AND INCLUDING 132KV)

PVC INSULATED ARMoured CABLES

- Application** - Indoors or Outdoors in cable ducts, cable trays, conduits or underground locations under mechanical stresses in power and switching stations.
 - Local distribution systems, Industrial and Commercial units for basic power & lighting purpose.

Standards	BS 6346, IEC 60502-1 & VDE 0271
Operating Temperature	70° C
Short Circuit Temp.	160° C
Working Voltage	600 / 1000 Volts
Test Voltage	3 KV r m s for 5 minutes

CONSTRUCTION

Conductor Aluminium / Annealed plain copper solid* / stranded conductor conform to BS 6360 and IEC 60228, Class 2 (Circular / Sector shaped)

Insulation PVC type T11 as per BS 7655: Section 3.1 and PVC type A as per IEC 60502-1

Single core	Red, Yellow, Blue, Black, Grey or Natural.
2 Core	Red, Black
3 Core	Red, Yellow, Blue
4 Core	Red, Yellow, Blue, Black
5 Core	Red, Yellow, Blue, Black & Grey
6 Core & above	Blue, Yellow and remaining core Grey each layer.

Assembly Insulated conductors are laid up together, if necessary interstices may be filled with fillers.

Fillers Non-hygroscopic Poly propylene fillers are included between laid up cores wherever required

A separator tape of non-hygroscopic poly propylene material is applied over laid up cores wherever necessary.

Bedding Extruded PVC compatible with operating temperature.

Armour For Single Core - Aluminium round wire / flat Strip.
 For Multicore - Galvanised Steel round wire / flat wire / tape.

Outer Sheath Extruded PVC / Special PVC compound such as Flame Retardant (FR), Flame Retardant Low Smoke (FRLS), Low Smoke Zero Halogen (LSOH) can be used for outer sheath to suit a variety of environment and fire risk conditions. Flammability test confirms to IEC 332 & Swedish chimney. For installation where fire and associated problems such as emission of smoke and toxic fumes offer a serious potential threat, special LSF (Low smoke & fumes) compound can be provided. LSF compound is Halogen free (Flourine, Chlorine, Bromine) when tested as per BS 6425 (Pt 1) & IEC 60754 (Pt 1). The acid gas evolved during combustion is less than 0.5% by weight of material.

Minimum Bending radius :12 times the cable diameter

Admissible Pulling Force : Aluminium-30/mm²

• The above data is indicative & may be changed without prior information.
 • Conductor up to 16 mm² will be non-compacted. • Above 16mm² compacted sector conductor.
 • Cables can be supplied in multiple of 250/500/1000 mtrs. or as per customer's requirements.

Operating Conditions
 • Ground temp.: 30°C • Depth of laying: 75cm • Thermal resistivity of soil: 150°C cm/W
 • Ambient Air Temp.: 40°C

• The above data is indicative & may be changed without prior information.
 • Conductor up to 16 mm² will be non-compacted. • Above 16mm² compacted sector conductor.
 • Cables can be supplied in multiple of 250/500/1000 mtrs. or as per customers requirements.

Operating Conditions
 • Ambient Air Temp.: 40°C • Ground temp.: 30°C • Depth of laying: 75cm • Thermal resistivity of soil : 150°C cmW

• The above data is indicative & may be changed without prior information.
 • Conductor can be Solid or stranded conductor

• Ambient Air Temp.: 40°C
 • Ground temp.: 30°C

Operating Conditions
 • Depth of laying: 75cm

• Thermal resistivity of soil : 150°C cm/W

XLPE INSULATED ARMoured CABLES

- Application**
- Indoors or Outdoors in cable ducts, cable trays, conduits or underground locations under mechanical stresses in power and switching stations.
 - Local distribution systems, Industrial and Commercial units for basic power & lighting purpose.

Standards	BS 5467, IEC 60502-1& VDE 0276
Operating Temperature	90° C
Short Circuit Temp.	250° C
Working Voltage.	600 / 1000 Volts
Test Voltage	3 KV r m s for 5 minutes

CONSTRUCTION

Conductor Aluminium / Annealed plain copper solid* / stranded conductor conform to BS 6360 and IEC 60228 Class 2 (Circular / Sector shaped)

Insulation Cross linked polyethylene (XLPE)

Core Colour	
Single core	Red, Yellow, Blue, Black, Grey or Natural
2 Core	Red, Black
3 Core	Red, Yellow, Blue
4 Core	Red, Yellow, Blue, Black
5 Core	Red, Yellow, Blue, Black & Grey
6 Core & above	Blue, Yellow and remaining core Grey each layer.

Assembly Insulated conductors are laid up together, if necessary interstices may be filled with fillers.

Fillers Non-hygroscopic Poly propylene fillers are included between laid up cores wherever required.

A separator tape of non-hygroscopic poly propylene material is applied over laid up core wherever necessary.

Bedding Extruded PVC compatible with operating temperature

Armour For Single Core - Aluminium round wire / flat wire. For Multicore - Galvanised Steel round wire / flat wire / tape.

Outer Sheath Extruded PVC / Special PVC compound such as Flame Retardant (FR), Flame Retardant Low Smoke (FRLS), Low Smoke Zero Halogen (LSOH) can be used for outer sheath to suit a variety of environment and fire risk conditions. Flammability test confirms to IEC 332 & Swedish chimney. For installation where fire and associated problems such as emission of smoke and toxic fumes offer a serious potential threat, special LSF (Low smoke & fumes) compound can be provided. LSF compound is Halogen free (Flourine, Chlorine, Bromine) when tested as per BS 6425 (Pt 1) & IEC 60754 (Pt 1). The acid gas evolved during combustion is less than 0.5% by weight of material.

Minimum Bending radius :12 times the cable diameter

Admissible Pulling Force : Aluminium-30/mm²

Advantages

Advantages of XLPE cable as compared to thermoplastic cable like PVC are listed below:

- Higher power rating.
- Higher emergency overload rating.
- Higher short circuit rating.
- Higher insulation resistance (100 times more than that of PVC).
- Higher resistance to moisture (100 times more than that of PVC).
- Better resistance to surge currents.
- Capacity to withstand localised hot spot temperature (very important for industrial wiring in steel power stations etc.)
- Resistant to chemicals and corrosive gases etc. - hence suitable for installation in polluted atmosphere.
- Resistant to vibration, impact etc. - no hazard of hot deformation.
- Quick method of joining and termination with simple, non-expensive accessories.
- Longer cable life.

COMPARATIVE CURRENT RATINGS OF 1.1 KV PVC AND XLPE CABLES continues current rating of 3 & 4 core cables armoured & unarmoured laid Direct in the ground or in air 650/1100V Aluminium conductor.

AERIAL BUNCHED CABLES

Application: Outdoor distribution in Rural or residential areas Offers cost effective safer and reliable cable for reticulation.

Range: LT XLPE, AB cable or PE insulation

Standard:	IS 14255, BS 7870-5, BS 625 HD 626, VDE 00276 P 626, IEC 60502 NF C 33-209
Voltage:	600/1000V
Conductor:	Hard Drawn Aluminium, aluminium alloy or copper

Insulation: Specially formulated for exposure to sunlight and outdoor application. LT XLPE or PE is loaded with carbon black MV cable insulated and screened cores are PVC sheathed

Max Operating Temp: XLPE: Max 90°C
PVC or PE: Max 70°C

Construction: Insulated cores may be bundled together or laid up around high tensile insulated or bare messenger. If a messenger is provided, as the tension is taken by it, phase conductors can operate at maximum allowable conductor temperature.

Minimum Bending Radius: For LV 10 times & MV 15 times cable diameter

Solar Radiation: 1000 W/ sq m

LT AERIAL BUNCH CABLES

Cross Sectional view
Aerial Bunch Cables

1.1 KV Grade, are used for distributing power to individual consumers by utility service providers such as electricity boards and electricity distributing authorities. The cables are suspended overhead using electrical poles. The cables can be tapped intermittently from any required position, enabling them to be used in urban as well as rural areas.

Configuration

Single Phase or Three Phase systems with or without Street Light line.

Conductor

Phase or lighting conductor: Electrical grade Aluminium of H2 or H4 grade as per IS: 8130

Messenger conductor: Aluminium Silica and Magnesium Alloy.

Insulation

XLPE Compound/ PE compound

Identification of Phase

Ridges provided on the insulation of Phase Conductors: 1 ridge for the 1st phase, 2 ridges for the 2nd phase and 3 ridges for the 3rd phase. The neutral phase may have 4 ridges if required.

Colour of Insulation

As the cable remains exposed to environmental elements such as UV rays from sunlight, the insulation is mixed with a small amount of carbon black to prevent the deterioration of polythene.

Construction of Cable

The phase conductor can be of single phase or three phases. A lighting conductor can be also incorporated for street lighting. A messenger conductor supports the weight of the cable and keeps the assembly strung under tension. Phase conductors are made of concentrically stranded Aluminium Wires having 7 or 19 wires. Messenger conductors are made of a specially treated Silica, Magnesium and Aluminium Alloy having 7 or 19 wires. Phase and lighting conductors may be insulated with XLPE compound. Messenger conductors are kept either bare or insulated. Phase and lighting conductors are sometimes twisted around the messenger conductor. In special cases a neutral conductor may also be provided separately. Generally, the messenger acts as earth and neutral.

This Construction has additional advantages

Cables are lighter in weight

Easy to Install

Can be installed on poles, on walls etc.

Easy to make terminations and branch off joint on live wire as well protection against power theft.

Twisting and Laying

The phase conductor are being allowed to slide freely over the messenger conductor during temperature fluctuation. It is also to be ensured that during sliding the insulation should get scratches due to rubbing effect. During expansion and contraction, the phase conductors try to move towards the ends exerting additional stress at the terminating point or at the clipping point. By special twisting process such forces are neutralised. During installation and branching off, phase conductors can easily be loosened to crimp to the connectors without straining and damaging the phase conductor.

Avercab Aerial Bunched Cable : 1.1KV grade Stranded & Compacted Aluminium phase Conductor, and Stranded Messenger Conductor with All Aluminium Alloy, Phase Conductor is insulated with XLPE Compound, Messenger is either insulated or bare. Referred specification IS:14255-1995 up to latest amendment.

Avercab Aerial Bunched Cable : 1.1KV grade Stranded & Compacted Aluminium phase Conductor, and Stranded Messenger Conductor with All Aluminium Alloy, Phase Conductor is insulated with XLPE Compound, Messenger is either insulated or bare with lighting Conductor of 16mm². Referred specification IS:14255-1995 upto the latest amendment.

CABLES FOR INSTRUMENTATION

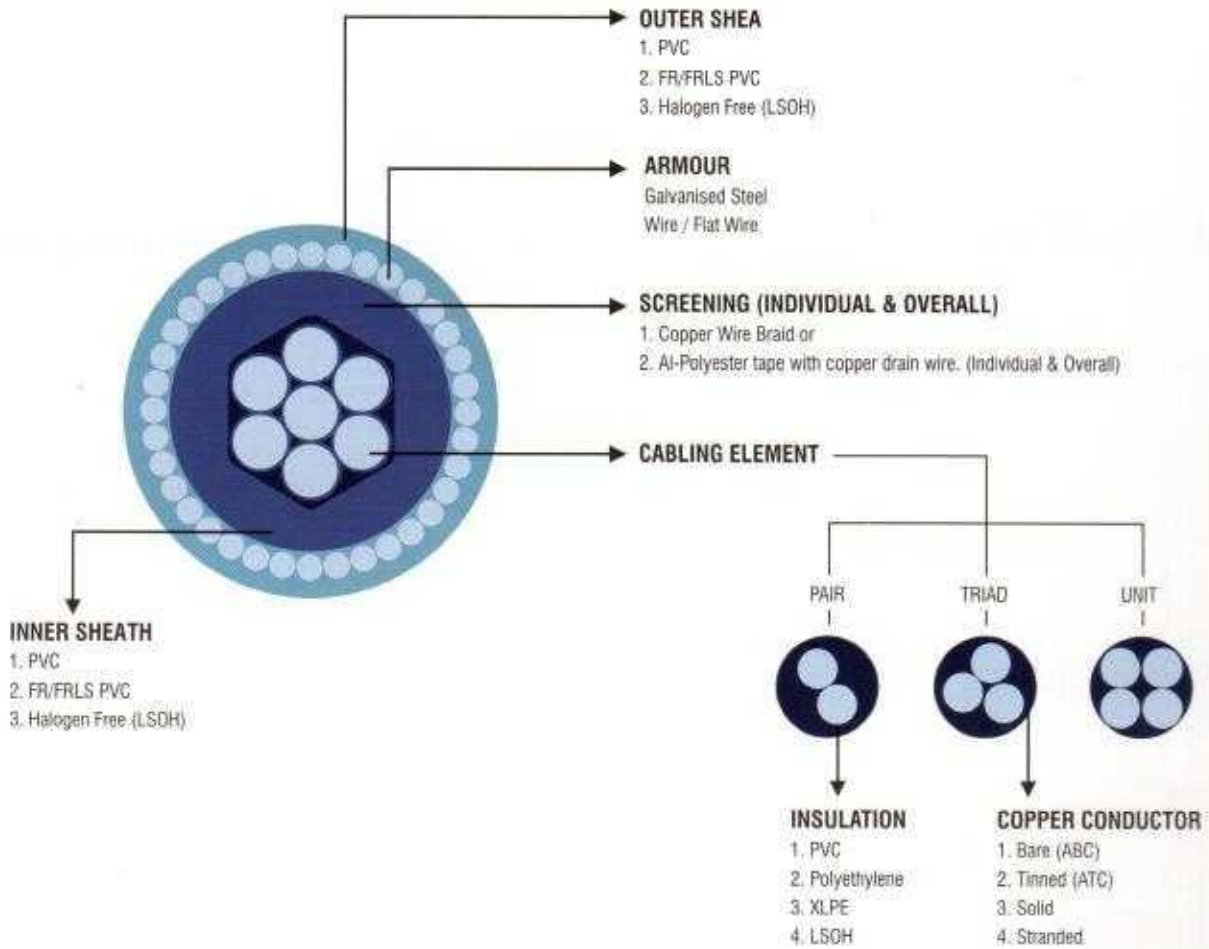

Avercab manufactures a wide variety of cables suitable for process instrumentation, which plays a vital role in measurement, supervision and control of the process. Introduction of microprocessor based / computerized instrumentation has demanded stringent quality requirements along with special electrical parameters for instrumentation cables.

The cables used for instrumentation are designed and manufactured very meticulously. KEI maintains high quality standards and follow & stringent in-process quality control during manufacturing of instrumentation cables, meeting the design parameters of the customer.

Conductor	0.5 Sq. mm to 2.5 Sq mm of solid/stranded Tinned/Bare copper conductors.
Insulation	PVC/Polyethylene/XLPE/LSOH as per requirement.
Elements / Core:	Pair/Triad/Quad, colour coded / number printed.
Screening	Aluminium Polyester screen over all (collective) screen (OAS), individual screen (IS), or both IS & OAS with ATC drain wire. Wire braiding can also be given as per customer requirement.
Element Laying	Concentric formation or unit & group formation as per requirement.
Armouring	Unarmoured / Galvanised steel wire / Flat wire armoured.
Sheathing	PVC, FR PVC, FRLS, LSOH as per requirement.
Specification	EIL-6-52-46, Rev.05, BS: 5308 Part 1 & Part 2, BSC 143-0.75 (24/0.2 mm) OAS, IEC 60092-375, 376, BS EN 50288, VDE 0815, VG 95218, NEK 606 and customers Specifications.)

THERMOCOUPLE EXTENSION / COMPENSATING CABLES

Thermocouple extension and compensating cables are designed for interconnection between thermocouple probes and control instrumentation. They are generally available in the following types:

Type (1)

Unarmoured cables with conductors insulated with PVC and twisted together in pairs, sheathed overall with PVC.

Type (2)

Armoured cables with conductors insulated with PVC and twisted together in pairs, PVC bedding, Galvanised steel wire armour and sheathed overall with PVC.

All of the above types of cables can be supplied unscreened or screened (individually, collectively or both) with an Aluminium Polyester tape screen incorporating tinned copper drain wire.

The construction is similar to paired instrumentation cable but the conductor material is different. Thermocouple are used in processes to sense temperature and is connected to the pyrometers for indication and control. The thermocouple and pyrometers are electrically connected by thermocouple extension/compensating cables. The conductors used for these cables are required to have similar thermo-electric (emf) properties as that of the thermocouple used for sensing the temperature.

Range of Instrumentation Cables:

Standard	ANSI MC 96.1, BS-1843, IEC 60584-3, ENI
Conductor	Solid type as per type & mentioned in the table
Insulation	PVC/Polyethylene/XLPE/LSOH as per requirement.
Elements	Pairs colour coded/number printed.
Screen	Aluminium Polyester tape screen with Copper drain wire or alternately with Tinned Copper wire braiding. Individual element or overall screening as specified.
Armouring	Galvanised steel round wire / Flat wire.
Sheathing	PVC, FR PVC, FRLS, LSOH as per requirement.

- 2 Core - Red - Black
- 3 Core - Red - Yellow - Blue
- 4 Core - Black - Red - Yellow - Blue
- 7- 37 Cores Blue, Yellow and remaining core Grey each layer.
- Other Core colors available as per customer specification

Cable Characteristics

TEMPERATURE	Range 25 to + 90°C
BENDING RADIUS	Circular conductor $r=6D$ Shaped conductor $r=8D$
MECHANICAL IMPACT	Very Good
FIRE PERFORMANCE	BS. 4066-1, BS4066-3
FLEXIBILITY	Rigid
HALOGEN FREE	BS6425-1
LOW SMOKE	Emissions BS 7622
FIRE RESISTANT	BS 6387

QUALITY AND TESTING

At Vishnu Cables in house testing of raw materials & testing during processing at every stage is a must. There is no lapse allowed at any point where constant improvement is monitored from the beginning to the last stage

Though the construction of LT Cables appear quite simple, the manufacturing technique should be such that the cable can accept and withstand all the severe operational hazards for all the times under any circumstances.

Avercab Cables, understanding the inherent intricate operational significance of Aerial Bunch Cables, have oriented themselves to manufacture these cables for the power distribution system particularly for the varied Indian conditions.
